this research methods textbook distinguishes itself from other textbooks by providing a unique framework and perspective for users students to establish the relevancy of research in their clinical practice many if not most students in professional preparation allied health care programs view the research methods statistics course requirement of the curriculum as an obstacle to be overcome or at best as a necessary evil most research methods textbooks promote these notions because of the way they are presented of course most times they are written by researchers or statisticians and are absolutely correct in presenting the theoretical underpinnings and mechanistic applications of the scientific method they correctly present explanations as to why one type of methodology requires a certain type of statistical analysis based on the characteristics of the study population the type of data collected or the

underlying assumptions pertinent to a specific statistical model so while technically beyond reproach their failure is in establishing how and why research activity and understanding is integral to a professional practice provided by publisher
